

IPEEC
G20 Global Summit on Financing Energy Efficiency,
Innovation and Clean Technology

High Level Roundtable A:
Financing Innovative Technology

June 12, 2019

Hiroki Kudo (Moderator)

Board Member of The Institute of Energy Economics, Japan (IEEJ)

Purpose of this roundtable

Industrial and financial entities provide their perspectives on the role of innovation investment in clean technologies (to the Summit) taking into consideration;

- Illustrating the necessary pre-conditions to innovation investment friendly environments through case studies in positive and successful public-private collaborations and co-investments
- Drawing insights in a form that can be replicable by other G20 countries and in other areas of the global energy transition

Goal of this roundtable discussion and Moderator's view

- The goal for this roundtable discussion is the recommendations and a panel debate will build consensus around key messages that will be drawn out by the moderator with an objective to contribute to G20 energy transitions and global environment for sustainable growth through the Summit consensus process.
- Considering the role of innovation investment in clean technologies globally, each parties, including governments/industrial and financial entities should focus on the following key issues
 - Understand different situation by countries including:
 - ✓ Economy and Energy supply/demand structure
 - ✓ Accessibility to energy resources (including climate)
 - ✓ Capacity of economy, technology innovation
 - ✓ Expected timing to achieve their decarbonatization goal
 - Construct collaborative framework globally to encourage innovation investment in clean technologies
